

FIRE STATION 72 ARCHITECTURAL SERVICES

The City of Logan Fire Department requested proposals for professional architectural services to assist in the adaptation of an existing conceptual fire station plan into completed construction plans and to oversee and provide construction site supervision of design requirements.

A total of nine proposals were received. The quality of proposals received was exceptional and after detailed review of each submittal, the selection committee selected **Design West Architects of Logan, Utah** to provide the architectural and construction supervision services for the project.

Our contact at Design West is Scott Theobald. All suppliers are asked to contact him, by e-mail, at scottt@designwestarchitects.com. Please use Logan Fire Station 72 in your subject line.

Thank you
